Sample Storage, Management, and Processing Inquiry Form

My Sample Related Request

I am interested in the following (check all that apply)

Sample Storage and Management

- Sample Coordination and Distribution
We manage the logistics and ship samples the world over
- Sample Kit, SOP, and Assay Development
We develop, prepare, or optimize, sample kits, SOPs, and assays
- Sample Preparation and Storage
Original and processed samples, or isolated PBMCs, inventoried and stored from room temperature to liquid nitrogen

Sample Processing

- Sample Analysis
Wide range of analyses available, including whole genome amplification, genotyping, viral load
- Sample Anonymization
Samples from one protocol can be delinked and anonymized for other research purposes
- Sample Characterization
Including DNA, immune monitoring, cellular hematology, cell differentiation, purification, or isolation
- Sample Processing
Sample type is isolated. DNA can be extracted from almost any material
- Sample Restoration
DNA/RNA can be extracted from nearly any starting material, even materials you might categorize as beyond useful purpose
- Sample Testing
Validation and verification testing, customized
- Sample Transformation
Immortalizes cellular components from your samples, assuring availability for ongoing research purposes. 97% success rate
